

Press release for Bau München April 17 - 22, 2023

**Koch & Partner, Bike Parking Systems AG – WÖHR Autoparksysteme GmbH**

## **Bike-Safe-Tower and Bikesafe go together!**

We are pleased to inform you that the bike products of Koch & Partner, Bike Parking Systems AG will be exclusively distributed internationally by **WÖHR Autoparksysteme GmbH** from April 17, 2023.

We are very pleased to present you our new partnership and the products in **hall B3 booth 319 at WÖHR Autoparksysteme GmbH!**

**Reserve an appointment on site already today or visit us spontaneously at the booth!**

### **About us:**

**Koch & Partner, Bike Parking Systems AG** stands for clever, safe and economic bike parking concepts that incorporate the whole spatial planning and offer measurable added value to municipalities, investors and users.

### **Our claim:**

- All bike parking facilities must be safe, space-saving and easy to use.
- Together with our individual parking concept, tailored to the project, our solutions should bring an economic advantage for investors / municipalities.
- We support you object-specific with the modifiable Bike Parking solutions and thus actively help to motivate commuters to switch to the bicycle.

### **Our solutions:**

- With the **Bike-Safe-Tower** and the **Bike-Parking-Locker**, we have created new possibilities for urban planners and urban developers. With a clever integration of our systems, we finally offer commuters a safe bike parking for their high-quality bikes. Your own health, the environment and the population burdened by commuter traffic will thank you if they cycle the first or last kilometers of their commute to work.
- Our **Bike-Parking-Lift**, is an exciting alternative to double level parking when building apartments. If you implement the recommended bike cellar sizes, you can save over **1m³ of space volume** per parking space. Our customers say: "**The bike parking lift finances itself**".

**WÖHR Autoparksysteme GmbH** is one of the leading international manufacturers of space-saving car parking systems. We are experts in the development, manufacturing and assembly of intelligent and technologically advanced parking systems for cars and bikes. Our projects with mechanical, semi-automatic and fully automatic parking systems are unique and located in the world's most beautiful metropolises, wherever space is scarce and dense parking solutions are in demand.

A visit to us at BAU 2023 at the **WÖHR exhibition stand hall B3 booth 319** is worthwhile for everyone who wants to take a look at the present and future of urban mobility.

**We are looking forward to your visit.**
