- ✔ Minimum footprint from 2.1 m x 5 m
- ✔ Access by smartphone
- ✔ Mobile, transportable by truck
- ✔ Equipped with kinetic bike lift
- ✔ Independent power supply
- ✔ Option: Battery charging station

8 or 16 parking spaces per bike box

The BIKE-PARKING-LOCKER is available in two versions with 8 or 16 bicycle parking spaces (type 8 or type 16), which safely protects all bicycles from weather and theft. The bike box is well ventilated to prevent waterlogging or heat build-up.

Minimum footprint: One car parking space

The BIKE-PARKING-LOCKER only requires a parking space of 2.1 m x 5 m for 8 bicycles (this corresponds to the size of a car parking space), and only 3.1 m x 5 m for 16 bicycles!

Robust construction and valuable design

Despite its mobile use, the BIKE-PARKING-LOCKER is robustly built so that even after years of use there are no defects in terms of function and visual design. Therefore, it is equally suitable for temporary or stationary use.

Access for authorised clients only

Access to the bike box is ensured with a smartphone app. Only authorised and registered clients get access to the respective box. The app is free and the operator can set the parking rates themselves - and also offer free parking and subscription models.

Mobile and transportable

The container design allows it to be transported by truck with a mobile crane. This makes it easy to move the bike box to the desired location or to relocate it quickly if necessary. The bicycle box is secured with a vibration and GPS sensor.

Photovoltaics for self-sufficient operation

The necessary power supply for electronic access, monitoring and interior lighting is provided by a photovoltaic system. This ensures the operation of the bicycle box regardless of the location and at any time of year. Optionally, the possibility of a battery charging station can also be integrated.

Comfort parking with kinetic bike lift

Each bicycle parking space is equipped with a bicycle lift that brings each bicycle (up to 30 kg) into the horizontal parking position and back again by means of mechanical kinetics. – Without effort, automatically and safely. More information about the bicycle lift: bike-parking-lift.com

Installed in every BIKE-PARKING-LOCKER:

BIKE-PARKING-LIFT with kinetic lift – ensures comfortable parking and perfect parking order.
